

5. Project Development Phase :

Step 1: Create Update Set :

- Go to All menus and search for Local Update Sets.
- Click New. Name: Project Update Set, State: In progress, Application: Global.
- Save the form and click Make This My Current Set under Related Links.

Step 2: Create Custom Table :

- All menus > System Definition > Tables > New.
- Label: Incident WorkFlow. Uncheck Create module and save.
- Open the Controls tab and enable Auto-number (Prefix INC, 5 digits). Save again.

Step 3: Create Fields and Choices :

Open the form, then Configure > Form Designer. Add the fields listed in the data model and add choices for Category, Subcategory and State. Save and reload the form.

Step 4: Category-Subcategory Dependency :

- Right-click the Subcategory field and select Configure Dictionary.
- Open Advanced view and go to the Dependent Field tab.
- Enable Use dependent field and set Dependent on field = Category.
- In the Choices list, set the Dependent value for each Subcategory choice (network, hardware, access, performance).

Step 5: Build the Flow in Flow Designer :

- Flow: All menus > Flow Designer > New > Flow. Name: Auto Classify School IT Tickets, Application: Global.
- Trigger: Record Created on Incident WorkFlow, condition Category is empty.
- If Short description contains Wi-Fi OR Network > Update Record: Category = Network, Subcategory = Wi-Fi.

- Else If Short description contains Projector > Category = Hardware, Subcategory = Projector.
- Else If Short description contains Forgot password > Category = Access, Subcategory = Forgot Password.
- Else If Short description contains Slow computer > Category = Performance, Subcategory = Slow Computer.
- Send Email: To = Caller > Email; Subject = "Your Request for the issue has been submitted."; Body = ticket confirmation message.
- Finally: click Activate
