

8. Project Demonstration Phase :

Demo Flow

11. Explain the problem: manual categorization by IT staff.
12. Open the Incident WorkFlow form and enter only Caller and Short Description (e.g., WiFi not working in library).
13. Save and reload: Category = Network and Subcategory = Wi-Fi are filled automatically.
14. Repeat with "Projector not turning on": Hardware / Projector.
15. Open System Logs > Emails and preview the confirmation mail sent to the caller.
16. Show the flow in Flow Designer and the exported Update Set.

Results

Consistent classification, no human error, reduced manual work for IT staff and instant acknowledgement to callers.

Conclusion

The project delivers a complete end-to-end, no-code automation for a school IT helpdesk. It reduces manual effort, improves accuracy through dependent choices, and improves communication through automated email notifications. The design suits small and medium environments such as educational institutions.

Future Enhancements

- Auto-assign the Assigned Group based on Category.
- SLA tracking and escalation.
- A default branch for unmatched keywords.
- Predictive Intelligence for smarter classification.
